Key points

June 2007: External Trade – Key points

The total value of merchandise exports for the year ended June 2007 was \$33.4¹ billion, up from \$30.8 billion in the year to June 2006. The largest increases in export values were in aluminium (up 24 percent), wood (up 12.4 percent) and dairy (up 12 percent). High world commodity prices for some key New Zealand exports have helped dampen the effects of the strong New Zealand dollar.

New Zealand's imports increased by 5.5 percent in the year to June 2007 and were valued at \$41.1 billion. The largest increases in import values were in ships and boats (up 117 percent), mineral fuel (up 10.2 percent) and electrical machinery (up 10.6 percent).

Exports

- Australia continued to be New Zealand's principal export market, worth \$7.2 billion. Exports to Australia rose by 6 percent in the year to June 2007. The United States and Japan were New Zealand's second and third largest export markets, receiving \$4.5 billion and \$3.5 billion worth of goods respectively. New Zealand's fourth largest export destination was China. Exports to China were worth \$1.9 billion in the year ended June 2007. Exports to the Republic of Korea, New Zealand's sixth largest export market, increased by 21 percent in the latest June year.
- The European Union accounted for \$5.2 billion or 15 percent of total exports. The most important markets within this region were the United Kingdom, German and Belgium. Exports to APEC economies accounted for 69.5 percent of New Zealand's total exports and were worth \$24.3 billion in the year ended June 2007.
- Dairy products were New Zealand's largest export earners in the year to June 2007, accounting for 21 percent of total merchandise exports and valued at \$7.5 billion. Meat and wood were our next largest export earners, accounting for 13.2 and 6.3 percent of total exports respectively. Machinery (5.4 percent), aluminium (4.5 percent), fruit (3.5 percent) and fish (3.3 percent) were also key components of New Zealand's goods export portfolio in the latest June year.

Imports

- Australia remained New Zealand's largest source of merchandise imports in the year ended June 2007, with imports valued at \$8.5 billion accounting for 20.8 percent of total imports. Imports from Australia increased 12.8 percent compared with the year ended June 2006. Imports from China, valued at \$5.2 billion, increased by 18.7 percent. Other major sources of imports for New Zealand were the United States (10.8 percent), Japan (8.9 percent) and Singapore (4.7 percent).
- Imports from the European Union were valued at \$6.9 billion in the year ended June 2007 and accounted for 16.9 percent of total imports. Germany, the United Kingdom and Italy were the most important sources of imports for New Zealand from within this region. Imports from APEC economies were valued at \$30.8 billion and accounted for 75 percent of total imports in the year ended June 2007.
- Fuels and oils were New Zealand's most valuable imported products in the year ended June 2007 – they were worth \$5.9 billion and accounted for 14 percent of total imports. Other significant imports included machinery (\$5.2 billion), motor vehicles (\$4.8 billion) and electrical machinery (\$3.7 billion).

(1) Excluding re-exports of \$1.5 billion.

Services

- In the year to March 2007, New Zealand's service exports were worth \$12.3 billion, up \$450 million from the March 2006 year. New Zealand imported services to the value of \$12.1 billion, up \$325 million from the year to March 2006.
- Overseas visitor arrivals numbered 2.46 million in the year to June 2007. This was a 3.4 percent increase from the year to June 2006. The most important sources of visitors to New Zealand in the year to June 2007 were Australia, the United Kingdom, the United States, Japan, and China. China recently overtook South Korea as our fifth largest source of visitors.

General issues

The commodity tables show the principal markets for New Zealand's exports (and some imports) of several product groups, including agriculture, non-agriculture, dairy, meat, fruit and vegetables, forestry, machinery and textiles, clothing and footwear. In addition, the five groupings of APEC, OECD², EU (now expanded to 25 members), ASEAN (AFTA)³ and the Pacific have been added to the commodity tables to give more information.

The country aggregations that make up the regions used in the text are defined at the end of this edition. These have been determined on the basis of the Ministry's requirements and may not correspond with regional definitions appearing in other trade statistics publications. Other definitions, eg services definitions, are those used by Statistics New Zealand, based on standard IMF⁴ criteria. A summary of these also appears at the end of this edition.

Re-exports records goods brought into New Zealand and exported without a 'substantial transformation'. The 50 percent value-added is used as a yardstick to measure 'substantial transformation'; above that level, the goods are classified as domestic exports. Trans-shipment goods are not included. Goods that are re-exported will have previously figured in some form in the import statistics. Earlier editions of this publication have not included re-export data and have therefore understated exports and overstated the trade deficit.

Some data published in this book is provisional for the most recent period. It has been compiled for the Ministry of Foreign Affairs and Trade by Statistics NZ from its INFOS⁵ database – refer to www.stats.govt.nz for more and sometimes updated data. All data use New Zealand dollars unless otherwise stated.

(2) Organisation for Economic Cooperation and Development.

(3) Association of South-East Asian Nations; ASEAN Free Trade Area.

(4) International Monetary Fund.

(5) Information Network for Official Statistics.

Standard definitions and notes

Agricultural exports	This uses the standard WTO definition for agriculture. Products include HS codes 1–24 inclusive, with the exception of HS 03 and some of HS 16 (processed fish). It also includes casein, hides and skins, and raw wool.
CIF	Cost, insurance, freight – the market value (or FOB equivalent) of the imported goods plus the cost of freight and insurance from the source to destination.
Confidential classifications	Traders may ask, for commercial reasons, Statistics New Zealand to suppress details of their imports or exports for up to 12 months. A value for all 'confidential' trade now appears under catch-all HS 98. Through to April 2002, 'confidential' was included in HS 9707, but was subsequently placed in HS 98. Examples of exports currently classified as confidential include methanol, coal, wood pulp, clay, sphagnum moss, mushrooms and some iron and steel products. A full list of the goods classified under this heading is available on the Statistics NZ website (www.stats.govt.nz). The value of 'confidential' trade is considerable – exports of \$995 million (including re-exports of \$12 million) and imports of \$120 million for the June 2004 year.
FOB	Free on board – the value of the goods delivered to the port of export and loaded onto a vessel for transportation out of the country of origin. Used for exported goods.
Government services nie	These comprise transactions of central government, the central bank and local government. Both New Zealand government and foreign government transactions are recorded.
Insurance	Insurance and re-insurance of all types, including freight insurance. The values recorded alongside insurance measure the value of insurance services provided by an economy to non-residents (the Ministry of Foreign Affairs and Trade [MFAT] 'exports' series or, in Balance of Payments [BoP] terms, the credit item) and the value of insurance services purchased by residents from non-residents' insurers (the MFAT 'imports' series, or BoP debits item). Insurance services is measured by multiplying the total amount of insurance premiums exported or imported by the five-year average domestic service charge ratio. The latter is the ratio of the domestic insurance service charge to total domestic premiums when the service charge is calculated as premiums minus claims.
Merchandise goods nes	Tangible, moveable goods crossing the customs frontier. Not elsewhere specified.
Non-agricultural exports	This uses the standard WTO definition. Non-agricultural exports are comprised of all other exports not included in agricultural exports.

⁵ World Trade Organisation.

Non-merchandise goods	Goods returned after repair or modification in New Zealand; goods on short-term loan or lease; and service transactions, eg computer data tapes and drawings.
Other	This item covers those international service transactions not covered under the travel, transportation, insurance or government services nie items. They include communication services, construction services, financial services, computer and information services, royalties and licence fees, personal, cultural and recreational services, and other business services. Other business services includes merchanting, and other business, technical and professional services.
Provisional data	Readers may also note that the June and December editions of this publication differ, reflecting the availability of data sourced from Statistics NZ. Care must be taken to clarify whether import data is CIF or VFD, and whether export data includes re-exports or not. Re-exports are not included in this publication unless specifically stated. The most recent data is provisional and subject to revisions. Note also that Statistics NZ releases import data some three weeks before the provisional export data is released, but an estimate of the provisional export data is given at the time of the import data release. MFAT waits until 'final provisional' export data is released rather than using the earlier estimate, as there may be several changes at a more detailed level.
Re-exports	This data records goods brought into New Zealand and exported without a 'substantial transformation'. Although not a hard and fast rule, 50 percent value added is used as a yardstick to measure 'substantial transformation'; above that level, the goods are classified as domestic exports. Trans-shipment goods are not included. Goods that are re-exported will have previously figured in some form in the import statistics. Re-exports are not included in the general tables of this publication, and therefore underestimate the total trade in some cases.
Services	Items that are generally intangible or not physically moveable (eg export education and tourism).
Transportation	<p>Transportation measures the value of transactions in transportation services between residents of different economies. Transportation services are those services provided through carriers (such as ships and aircraft) by their operators, and the goods and services consumed by carriers in the course of their operations. By international convention, exports are foreigners carried by a New Zealand carrier, either here or overseas. Imports are New Zealanders carried by a foreign carrier. New Zealanders carried by a domestic carrier (either here or overseas) constitute a domestic transaction and are not part of international trade.</p> <p>The types of services provided through carriers include the carriage of freight (exports and imports) and passengers. Other transportation services covered include the charter of carriers, and airport and harbour fees. Goods consumed by</p>

carriers in the course of their operations, including bunkering and provisioning, are recorded under merchandise goods.

Travel Travel covers the goods and services acquired from an economy by individuals defined as travellers during their stay in that economy. The international carriage of travellers is not included here but is classified as transportation.

VFD Value for duty – the market value of imported goods as used for Customs' valuation purposes for tariff assessment in New Zealand.

Additional notes The merchandise trade statistics are incompatible with the services data. Services data is collected and collated by Statistics NZ in line with the principles set by the IMF for BoP data. These principles also have methodology for the collation and presentation of goods data that differs from that of the merchandise goods data used above. The key point is that one should not add the merchandise trade figures to services in order to obtain an overview of 'goods and services trade'. Instead, readers are referred to the full BoP series, which adjust merchandise goods values according to the principles set down by the IMF. In particular, the value of imported goods is adjusted to a FOB-equivalent basis in BoP statistics, but not in merchandise trade series. Further information on BoP concepts and methods is available from Statistics NZ.
